Aim of CARE workshop is to exchange knowledge, practices and experiences on environmental risk prevention and management as fundamental approach in spatial planning, policies and urban design design in vulnerable cities and areas.

Orosei and Mamoiada are territories where many elements play an important role: natural sites, rests of historical settlements, caves and productive areas, agriculture as vineyards, touristic amenities, reference places that became part of the cultural heritage of local population.

The operation of each elements as part of the bigger system influence the others. This interactive condition exposes the system itself to several risks and requires responsible practices based on coherence of actions and changes. Climate change and scarcity of energy supply are going to effect and transform the territories.

Such a situation pushes the contest to enhance its awareness on risks and to acquire and improve skills and methods to cope with this important issue.

The topic of this edition are Walkability and Phisycal Barriere in Orosei and Bioenergy Community in Mamoiada.

The maximum number of participants is 25: 10 places for Foreigners and 15 for Italians.

The available places will be granted in the order of registration info rizzi@uniss.it
